

Zenport ZJ67 Grafting Tool (Omega Cut)

The Zenport ZJ67 Vine and Tree Grafting Tool (Omega Cut), quickly and easily creates professional quality grafts. The clean cuts made by the grafting tool provides a perfect fit, every time. This increases the likelihood of the graft 'taking', leading to much less wastage.

This 2 in 1 tool contains both a pruner and grafting guillotine. This allows you to first prepare the plants to be grafted, by trimming away excess leaves and twigs. Then using the special grafting guillotine you can make a perfect omega cut into the grafting stock.

4 Easy Steps For Clean Professional Grafts

Step 1

Use the pruner to cut away excess leaves and twigs from the grafting area.

Step 2

Hold the grafting stock in the grafting tool and squeeze the handle to make the cut. Repeat this step to cut a stem from the donor plant.

Step 3

Slide the donor stem into the groove of the stock plant, matching the cut surfaces as closely as possible. If the stock and donor plant are not the same size, match on one side only.

Step 4

Join and bind with grafting/electrical tape.

For best results use Zenport Grafting/Electrical Tape.
